CODE

Apollonian	PARI/GP
Computations for Apollonian circle packings, including basic operations, generating pictures in LaTeX, and a very efficient implementation for finding all missing curvatures up to a bound. Available at https://github.com/JamesRickards-Canada/Apollonian	
Apollonian-Prime	PARI/GP
Computations for thickened prime components of Apollonian circle packings, Available at https://github.com/JamesRickards-Canada/Apollonian-Prime	
Fundamental domains for Shimura curves	PARI/GP
Computation of fundamental domains for arithmetic Fuchsian groups. Improves on the algorithms of Voight and Page, and is significantly more efficient than the live Magma implementation (from 100 to millions of times as fast, depending on the example). Will be integrated into PARI/GP. Available at https://github.com/JamesRickards-Canada/Fundamental-Domains-for-Shimura-curves	
Isogeny	PARI/GP, Sage
Computation of supersingular ℓ and L isogeny graphs, significantly more efficient than the live Sage implementation. Includes code to seamlessly use it inside of Sage. Available at https://github.com/JamesRickards-Canada/Isogeny	
Q-Quadratic	PARI/GP
Computing with integral binary quadratic forms and quaternion algebras over \mathbb{Q} . Includes algorithms to compute intersection numbers of modular geodesics, as described in my thesis and various papers. Available at https://github.com/JamesRickards-Canada/Q-Quadratic	
Semigroup Reciprocity	PARI/GP
Computation of orbits of semigroups, including efficient implementation of missing numbers in an orbit. This package accompanies the paper <i>Reciprocity obstructions in semigroup orbits in $SL(2, \mathbb{Z})$</i> , and includes methods to check various results. Available at https://github.com/JamesRickards-Canada/Semigroup-Reciprocity
